What is Biological Classification?

Biological classification is the systematic arrangement of living organisms into groups based on shared characteristics and evolutionary relationships. It simplifies the diversity of life by organizing organisms into categories that reflect their similarities and differences.

Importance of Biological Classification

- Organizes Biodiversity: Helps in cataloging all known species.
- Facilitates Study: Simplifies the study of organisms by grouping similar species.
- Understanding Evolution: Reveals evolutionary relationships among species.
- Conservation Efforts: Aids in identifying and protecting endangered species.

Hierarchical Levels of Biological Classification

Biological classification follows a hierarchical structure, with each level encompassing and subdividing the previous one. The main taxonomic ranks, from the broadest to the most specific, are:

- Domain
- Kingdom
- Phylum (or Division in plants)

- Class
- Order
- Family
- Genus
- Species
