- Import the database using `Data Pump Import (impdp)`.
- Reconfigure network and service endpoints.

2. RMAN (Recovery Manager) Duplicate

RMAN duplication creates a copy of the database using backup sets or active database cloning.

Advantages:

- Efficient for large databases.
- Supports incremental backups.
- Minimal downtime when using active duplication.

Disadvantages:

- Requires careful configuration.
- Needs proper backup management.

Steps:

- Take a backup of the source database.

Advantages:

- Minimal downtime.
- Maintains a synchronized standby database.
- Supports rolling migrations.

Disadvantages:

- Complex setup.
- Additional licensing costs.

Steps:

- Set up Data Guard configuration between primary and standby.
- Perform a switchover or failover at the appropriate time.
- Redirect applications to the new environment.
- Decommission old system if needed.

4. GoldenGate Replication

Oracle GoldenGate offers real-time data replication, enabling live migration with minimal impact.

Advantages:

- Very low downtime.
