- Optimize load capacities
- Schedule shipments effectively

Production Planning

Using mixed-integer linear programming (MILP) models, Duxbury can develop production schedules that align with demand forecasts, capacity constraints, and inventory policies.

Simulation and Scenario Analysis

Simulation models allow Duxbury to test various "what-if" scenarios, such as supplier delays, sudden demand spikes, or transportation disruptions. This helps assess the resilience of the supply chain and develop contingency plans.

Case Example: Disruption Response Simulation

Suppose Duxbury faces a potential supplier shutdown. Simulation modeling can evaluate:

- Impact on inventory levels
- Lead time variations
- Alternative sourcing options
- Cost implications of different response strategies

This proactive approach helps Duxbury prepare effectively for unexpected events.

Integrating Technology for Real-Time Supply Chain Modeling

Modern supply chain modeling is increasingly reliant on real-time data and advanced analytics:

- IoT Devices: Provide live updates on inventory, shipment status, and equipment health.
- AI and Machine Learning: Enhance demand forecasting accuracy, identify patterns, and suggest optimal actions.
- Cloud-Based Platforms: Facilitate collaboration among stakeholders and provide scalable computing resources.

By integrating these tools, Duxbury can transition from static models to dynamic, real-time decision support systems.
