- Heat Exchanger: Transfers heat from combustion to water.
- Thermostat: Regulates water temperature to prevent scalding and optimize energy use.
- Flame Supervision Device (FSD): Ensures the gas supply is shut off if the flame is extinguished.
- Venting System: Directs combustion gases safely outside.

- Expansion Vessel: Accommodates water volume changes due to heating.

Safety Features

Junkers models typically include multiple safety mechanisms:

- Flame Detection: Ensures gas is only supplied when a flame is present.
- Overheat Protection: Shuts down the heater if water temperature exceeds safe limits.
- Pressure Relief Valves: Prevent excessive pressure buildup.
