- Deploy your portlet to Liferay server:

```
```bash
```

```
mvn clean package
```

```
```
```

- Access your portlet via the portal interface, usually under the "Add Application" menu.

Source Code Example: Simple Greeting Portlet

```
```java
```

```
package com.example.liferay.portlet;
```

```
import com.liferay.portal.kernel.portlet.bridges.mvc.MVCPortlet;
```

```
import javax.portlet.Portlet;
```

```
import javax.portlet.PortletException;
```

```
import javax.portlet.RenderRequest;
```

```
import javax.portlet.RenderResponse;
```

```
import java.io.IOException;
```

```
public class GreetingPortlet extends MVCPortlet {
```

```
 @Override
```

```
 public void doView(RenderRequest renderRequest, RenderResponse renderResponse)
```

```
 throws IOException, PortletException {
```

```
 String greeting = "Hello, welcome to Liferay!";
```

```
 renderRequest.setAttribute("greetingMessage", greeting);
```

```
super.doView(renderRequest, renderResponse);

}

}

...

```

And the corresponding JSP (`view.jsp`):

## Setting Up a Liferay Development Environment

Before diving into source code development, establishing a proper environment is crucial. Here are the essential steps:

### 2.1 Prerequisites

- Java Development Kit (JDK): Liferay 7.x supports Java 8 or higher.
- Database: MySQL, PostgreSQL, or other supported databases.
- Build Tools: Maven or Gradle, depending on project configuration.
- Integrated Development Environment (IDE): Eclipse, IntelliJ IDEA, or Visual Studio Code.
- Liferay Bundle: Official Liferay bundles are pre-configured packages with server and portal installed.

### 2.2 Installing Liferay Bundle

Download the latest Liferay bundle from the official website, such as:

- Liferay DXP (Commercial)
- Liferay Community Edition (CE)

Extract the bundle and run the server:

```
```bash
```

```
cd liferay-ce-
```

```
./gradlew clean deploy
```

```
```
```

or for Windows:

```
```cmd
```

```
gradlew.bat clean deploy
```

```
```
```

Once the server is running, access the portal via `http://localhost:8080` and proceed with customization.

## Creating a Liferay Project with Source Code

Developing custom functionalities involves creating portlets, themes, hooks, or modules. This section focuses on building a modular portlet project, which is the most common extension point.

### 2.1 Using Liferay Workspace

The recommended approach is to create a Liferay Workspace, a development environment that manages multiple modules.

Steps:

- Create a Workspace:

Using Liferay Blade CLI:

```
```bash
```

```
blade create -t theme -p com.example.mytheme my-theme
```

```
```
```

Or, create a workspace:

```
```bash
```

```
blade init my-liferay-workspace
```

```
```
```

- Add a Module (Portlet):

```
``bash
```

```
cd my-liferay-workspace
```

```
blade create -t portlet -p com.example.myportlet my-portlet
```

```
```
```

This creates a structured project with predefined configurations, making it easier to develop, deploy, and maintain.

2.2 Understanding the Source Code Structure

A typical portlet project contains:

- ``src/main/java/``: Java classes, portlet controllers, services.
- ``src/main/resources/``: Configuration files, ``portlet.xml``, ``liferay-portlet.xml``.
- ``src/main/webapp/``: JSPs, CSS, JavaScript, images.
- ``build.gradle``: Build script with dependencies and build instructions.

2.3 Developing Custom Portlets

Key steps:

- Define Portlet Class:

```
``java
```

```
package com.example.myportlet;
```

```
import com.liferay.portal.kernel.portlet.bridges.mvc.MVCPortlet;
```

```
import javax.portlet.Portlet;
```

```
public class MyPortlet extends MVCPortlet {
```

```
// Override methods or add custom logic
```

```
}
```

```
```
```

- Configure `portlet.xml` and `liferay-portlet.xml` to register the portlet.
- Create JSP Views for rendering UI.
- Add Dependencies: For example, Liferay MVC frameworks, API libraries.

## 2.4 Deploying the Portlet

Build the project:

```
```bash
```

```
./gradlew build
```

```
```
```

Deploy the resulting `.jar` or `.war` file into the Liferay server:

```
```bash
```

```
./gradlew deploy
```

```
```
```

Access the portal, navigate to the Site Builder, and add the custom portlet to a page.

## Best Practices for Liferay Development

Creating a scalable, maintainable Liferay project involves adhering to best practices:

### 3.1 Modular Design

- Utilize Liferay's modular architecture to break down functionalities into manageable modules.

- Follow OSGi best practices for service registration and dependency management.

### 3.2 Use of Service Builder

- Leverage Liferay Service Builder to generate persistence and service layers, reducing boilerplate code.
- Define entities in `service.xml`, generate code, and customize as needed.

### 3.3 Version Control and CI/CD

- Maintain source code in repositories like Git.
- Automate build, testing, and deployment pipelines with Jenkins or GitHub Actions.

### 3.4 Performance Optimization

- Cache data where appropriate.
- Minimize server calls and optimize database queries.
- Use lazy loading for heavy resources.

### 3.5 Security

- Implement proper user permissions.
- Sanitize inputs.
- Use HTTPS and secure sessions.

## Sample Source Code Snippet: A Basic Portlet

Here's an example of a minimal portlet class:

```
```java

package com.example.myportlet;

import com.liferay.portal.kernel.portlet.bridges.mvc.MVCPortlet;

import javax.portlet.Portlet;
```

```
public class HelloWorldPortlet extends MVCPortlet {  
  
    // Custom logic can be added here  
  
}  
...  

```

And a simple JSP view (`view.jsp`):

```
```.jsp  

Hello Liferay
Hello, Welcome to Liferay Portlet!
...

```

This forms the foundation for building more complex portlets with user interactions, data integration, and dynamic content.
