Sample Topics and Their Explanation from CSVTU Notes

First Law of Thermodynamics

The First Law states that energy cannot be created or destroyed, only transferred or converted. Mathematically expressed as:

$$\Delta U = Q - W$$

Where:

- ΔU = Change in internal energy
- Q = Heat added to the system

- W = Work done by the system

This law applies to closed systems and is fundamental in analyzing energy transfer during processes like heating, work, and phase change.

Second Law and Entropy

The Second Law introduces entropy (S), a measure of disorder or randomness. For a reversible process, the change in entropy is given by:

$$dS = \delta Q_{rev} / T$$

In practical applications, the second law helps determine the maximum possible efficiency of engines and refrigerators.

Important Formulas in Thermodynamics CSVTU Notes
