QuestionAnswer What is a fraction and how is it related to decimals? A fraction shows parts of a

whole, like $\frac{1}{2}$, while a decimal represents the same part in a decimal form, like 0.5. Both are ways to express parts of a whole. How can I convert a simple fraction to a decimal? Divide the numerator (top number) by the denominator (bottom number). For example, $\frac{1}{2}$ becomes 1 divided by 2, which equals 0.5. What is an easy activity to compare two fractions? Find common denominators and see which numerator is bigger. For example, compare $\frac{1}{4}$ and $\frac{1}{2}$ by converting $\frac{1}{2}$ to $\frac{2}{4}$, so $\frac{1}{4}$ vs $\frac{2}{4}$? $\frac{2}{4}$ is bigger. How can I practice adding fractions and decimals? Use simple examples like $\frac{1}{4} + \frac{1}{4}$ or $0.2 + 0.3$ by lining up decimal points or common denominators, then adding or subtracting. What is a fun activity to learn about fractions and decimals? Use a pizza or a cake divided into slices to visualize fractions, then convert those slices into decimal form to see the connection. How do I convert decimals to fractions? Write the decimal as a fraction with 1 as the denominator, then multiply numerator and denominator to make it a whole number. For example, $0.75 = \frac{75}{100}$, which simplifies to $\frac{3}{4}$. What are some easy games to practice fractions and decimals? Playing matching games where you match equivalent fractions and decimals, or using number line games to place decimals and fractions in order. Why is it important to learn about fractions and decimals at this age? Because they help you understand parts of a whole and how numbers work, which are important skills for more advanced math and real-life situations. Can I use everyday objects to learn about fractions and decimals? Yes! Use things like chocolate bars, apples, or coins to cut into parts and see how those parts relate to decimals and fractions.
