Types of Fish

There are many different types of fish. They can be broadly divided into two main groups:

- **Jawless Fish:** These are some of the earliest fish, like lampreys and hagfish. They don't have jaws and usually have soft, jelly-like bodies.
- **Jawed Fish:** Most fish we see today belong to this group. They have jaws, scales, and fins. Examples include sharks, goldfish, and tuna.

Where Do Fish Live?

Freshwater Fish

Freshwater fish live in rivers, lakes, and ponds. They usually have adaptations that help them survive in water that has a low salt content. Examples include:

- Goldfish
- Carp
- Trout

Saltwater Fish

Saltwater fish live in the ocean or seas. They are adapted to survive in water with high salt content. Examples include:

- Clownfish

Moving in Water

Fins help fish move smoothly through water. Different fins have different jobs:

- **Caudal fin:** The tail fin helps fish move forward.
- **Pectoral fins:** These fins help with steering and balance.
- **Pelvic fins:** They help with stability.

Eating Habits

Fish are diverse in what they eat:

- Some are herbivores and eat plants or algae.
- Others are carnivores and eat smaller fish or insects.
- Some are omnivores and eat both plants and animals.

Protection and Camouflage

Many fish have special features to protect themselves:
