Using your multimeter, identify the wires corresponding to tail lights, brake lights, and turn signals. It's best to test each function with the vehicle's lights activated.

- Prepare the Wiring Harness

- If installing a new harness, cut it to appropriate length, leaving some slack for movement.
- Strip the ends of the wires to make proper connections.
- Connect the Wires According to the Diagram

Use the wiring color codes as a guide:

- Connect the white wire to a solid chassis ground.
- Connect the brown wire to the tail light circuit.
- Connect the yellow wire to the left turn/brake light circuit.
- Connect the green wire to the right turn/brake light circuit.
- For 7-pin setups:
 - Connect the blue wire to the electric brake circuit.
 - Connect the light blue wire to backup lights.
 - Connect the black/red wire to auxiliary power source.

Secure all connections with crimp connectors or soldering, then insulate with heat shrink or electrical tape.

- Mount the Trailer Plug

Once wired, securely mount the trailer plug to the rear bumper or a designated mounting bracket. Ensure wiring is protected from the elements and potential damage.

- Test the System

Reconnect the vehicle's battery and test all functions:

- Turn on the headlights (tail lights)
- Test brake lights
- Check turn signals (left and right)
- For 7-pin setups, test electric brakes and backup lights as applicable

Use a trailer light tester or multimeter to confirm proper wiring.

Troubleshooting Common Wiring Issues

- Lights not working: Confirm wiring connections, test for continuity, and verify power supply.
- Wrong lights illuminate: Check for crossed wires or incorrect pin connections.
- Flickering lights: Inspect ground connections for corrosion or looseness.
- No power to electric brakes: Ensure the blue wire has proper voltage and the brake controller is functioning.

Additional Tips for Wiring Success

- Always refer to the specific wiring diagram for your vehicle and harness model.
- Use high-quality connectors to prevent corrosion.
- Keep wiring neat and away from moving parts or heat sources.
- Consider using a trailer wiring converter if connecting to a non-standard trailer or aftermarket setup.
- Test the entire system before towing to ensure safety and functionality.
