Sample Implementation:

```
```python

import random

secret_number = random.randint(1, 100)

print("Guess the number between 1 and 100!")

while True:

    guess = int(input("Your guess: "))

    if guess == secret_number:

        print("Congratulations! You guessed it!")

        break

    elif guess

    result = num1 + num2

elif operator == '-':

    result = num1 - num2

elif operator == "*":

    result = num1 * num2

elif operator == '/':

    if num2 != 0:

        result = num1 / num2
