This comprehensive review explores the origins, methodology, significance, and implications of the 2013 impact factor list, shedding light on its role in shaping academic priorities and publishing strategies.

Understanding the Thomson Reuters Journal Impact Factor: Origins and Evolution

What Is the Journal Impact Factor?

The Journal Impact Factor (JIF), introduced by Eugene Garfield in the early 1960s, is a citation-based metric designed to evaluate the relative importance of academic journals within their fields. Calculated annually, the impact factor reflects the average number of citations received in a particular year by articles published in the journal during the previous two years.

The Role of Thomson Reuters in Impact Factor Calculation

Thomson Reuters, a global information provider, managed the Journal Citation Reports (JCR) until 2016, which included the impact factor data for thousands of scientific journals. The 2013 list was a snapshot of scholarly influence during that year, providing a standardized metric used worldwide for journal assessment.

How the 2013 Impact Factor Was Calculated

The 2013 impact factors were based on citations from journals indexed in the Web of Science

database, covering articles published in 2011 and 2012, divided into:

- Numerator: Total number of citations received in 2013 to articles published in 2011?2012.
- Denominator: Total number of "citable items" published in 2011?2012.

Mathematically:

Impact Factor (2013) = Citations in 2013 to articles published in 2011?2012 / Number of articles published in 2011?2012

This formula, while straightforward, has been subject to debate over its implications and limitations.
