Hypothesis Testing and Confidence Intervals

Problem Type: Testing whether a coefficient differs significantly from zero.

Example: Is the estimated return to education statistically significant?

Solution Highlights:

- Calculate standard errors of estimates
- Perform t-tests using the estimated coefficient and its standard error
- Construct confidence intervals for the parameter
- Interpret the statistical significance in economic terms

Key Learning Point: Understanding the difference between statistical significance and economic significance.

Model Diagnostics and Violations of Assumptions

Problem Type: Detecting heteroskedasticity or autocorrelation.

Example: Check whether the variance of the error term is constant across observations.

Solution Highlights:

- Conduct Breusch-Pagan or White tests for heteroskedasticity
- Use residual plots to visually inspect for patterns
- Adjust standard errors (e.g., robust standard errors) if heteroskedasticity is detected
- Discuss implications for inference
