What interviewers look for:

- Technical distinctions
- Advantages and disadvantages
- Application scenarios

Sample response:

?Analog CCTV systems transmit video signals over coaxial cables to a DVR, offering lower initial costs and simpler setup but limited resolution and scalability. IP-based systems, on the other hand, transmit digital video over Ethernet networks to NVRs or servers, providing higher resolution, easier remote access, and scalability. IP cameras support features like analytics, PTZ control, and remote management, making them suitable for complex surveillance needs. The choice between them depends on factors such as budget, desired image quality, and system complexity.?

Analytical tip:

Show logical understanding and the ability to advise clients based on their needs.
